

Joomla na Ubuntu desktopu

Da bi pokrenuli Joomla na vašem računaru nije dovoljno samo danlodovati kompresovani paket i jednostavno ga raspakovati. Potreban vam je i LAMP (Linux, Apache ,Mysql, Php).

Krenimo redom:

Sve potrebne programe možete instalirati sledećom komandom:

```
$ sudo apt-get install apache2 php5-mysql libapache2-mod-php5 mysql-server
```

u toku instalacije bićete pitani za Mysql root pasword: unesite željenu lozinku. Lozinku za Mysql bazu možete podesiti i iz terminala:

```
$ mysql -u root
```

```
$ mysql> SET PASSWORD FOR 'root'@'localhost' = PASSWORD('yourpassword');  
$ mysql> SET PASSWORD FOR 'root'@'yourhostname' = PASSWORD('yourpassword');
```

Da biste proverili da li je sve u redu, tj. da li ste sve instalrali pravilno ukucajte u vaš internet brozer vašu IP adresu (ukoliko koristite statučku IP adresu) ili jednostavno <http://localhost>. Treba da pojavi sledeći folder **apache2-default** koji kad otvorite pokazuje :

It Works!

Kreiranje Mysql baze:

Da bi Joomla mogla da se instalira morate je povezati sa Mysql bazom, a da bi ste to uradili morate prvo kreirati Mysql bazu. To se može uradit iz terminala:

```
$ mysqladmin -u root -p create joomla
```

gde je joomla ime vaše mysql baze, ili preko grafičkog programa Php My Admin. Ako ne želite da Mysql bazi pristupate kao root promenite korisnika:

```
$ sudo mysql -u root -p
```

```
$ sudo mysql> GRANT SELECT, INSERT, UPDATE, DELETE, CREATE, DROP, INDEX, ALTER,  
CREATE TEMPORARY TABLES, LOCK TABLES ON joomla.* TO 'yourusername'@'localhost'  
IDENTIFIED BY 'yourpassword';
```

Takođe sve ovo možete i iz Php My Admin panela.

PhpMyAdmin

Iz sinaptica ili komandom:

\$ sudo apt-get install phpmyadmin

instalirajte PhpMyAdmin kako bi mogli preko grafičkog interfejsa da kreirate Mysql baze. Pristupanje PhpMyAdmin panelu vrši se preko brozera unošenjem adrese:

<http://localhost/phpmyadmin>

Podrazumevan user je root a password je isti kao za Mysql bazu.

Instalacija Joomla:

Sa adrese skinite Joomla <http://www.joomla.org/content/blogcategory/32/66/>

Fajl koji skinete raspakujte i raspakovani folder prekopirajte u `/var/www`, što ćete najlakše uradite preko nautilusa. Da bi mogli kasnije da instalirate Joomla potrebno je promenite dozvole. S obzirom da je u pitanju lokalni server možete da ceo `/var/www` dodelite sebi tj. da mu promenite dozvole kako bi vi bili vlasnik. Isto možete uraditi i sa raspakovanim Joomla folderom. Ako želite osećaj servera onda nakon što ste prekopirali Joomla u `/var/www` u terminal ukucajte sledeće:

\$ sudo chown -R www-data:www-data /var/www/joomla

Nastavak instalacije:

pre-installation check

Pre-installation check for:
Joomla! 1.0.10 Stable [Sundown] 26 June 2006 00:00 UTC

If any of these items are highlighted in red then please take actions to correct them. Failure to do so could lead to your Joomla! installation not functioning correctly.

| | |
|---------------------------|-----------|
| PHP version >= 4.1.0 | Yes |
| -zlib compression support | Available |
| -XML support | Available |
| -MySQL support | Available |
| configuration.php | Writeable |
| Session save path | Writeable |
| /var/lib/php5 | Writeable |

Recommended settings:

These settings are recommended for PHP in order to ensure full compatibility with Joomla! However, Joomla! will still operate if your settings do not quite match the recommended

| Directive | Recommended | Actual |
|-----------------------|-------------|--------|
| Safe Mode: | OFF: | OFF |
| Display Errors: | ON: | ON |
| File Uploads: | ON: | ON |
| Magic Quotes GPC: | ON: | ON |
| Magic Quotes Runtime: | OFF: | OFF |
| Register Globals: | OFF: | OFF |
| Output Buffering: | OFF: | OFF |
| Session auto start: | OFF: | OFF |

Directory and File Permissions:

In order for Joomla! to function correctly it needs to be able to access or write to certain files or directories. If you see "Unwriteable" you need to change the permissions on the file or directory to allow Joomla! to write to it.

| | |
|---------------------------|-----------|
| administrator/backups/ | Writeable |
| administrator/components/ | Writeable |
| administrator/modules/ | Writeable |
| administrator/templates/ | Writeable |

MySQL database configuration:

Setting up Joomla! to run on your server involves 4 simple steps...

Please enter the hostname of the server Joomla! is to be installed on.

Enter the MySQL username, password and database name you wish to use with Joomla!.

Enter a table name prefix to be used by this Joomla! install and select what to do with existing tables from former installations.

Install the sample data unless you are an experienced Joomla! User wanting to start with a completely empty site.

| | | |
|---|--|--|
| Host Name | <input type="text" value="localhost"/> | <i>This is usually 'localhost'</i> |
| MySQL User Name | <input type="text" value="joomey"/> | <i>Either something as 'root' or a username given by the hoster</i> |
| MySQL Password | <input type="text" value="joompass123"/> | <i>For site security using a password for the mysql account is mandatory</i> |
| MySQL Database Name | <input type="text" value="joomla"/> | <i>Some hosts allow only a certain DB name per site. Use table prefix in this case for distinct Joomla! sites.</i> |
| MySQL Table Prefix | <input type="text" value="jos_"/> | |
| <input type="checkbox"/> Drop Existing Tables | | |
| <input type="checkbox"/> Backup Old Tables | | <i>Any existing backup tables from former Joomla! installations will be replaced</i> |
| <input checked="" type="checkbox"/> Install Sample Data | | <i>Don't uncheck this option unless you are experienced in using Joomla!</i> |

step 3

step 4

step 3

Confirm the site URL, path, admin e-mail and file/directory chmods

If URL and Path look correct then please do not change them. If you are not sure then please contact your ISP or administrator. Usually the values displayed will work for your site.

Enter your e-mail address, this will be the e-mail address of the site SuperAdministrator.

The permission settings will be used while installing Joomla itself, by the Joomla add-on-installers and by the media manager. If you are unsure what flags shall be set, leave the default settings at the moment. You can still change these flags later in the site global configuration.

Da biste obrisali instalacioni direktorijum ukucajte u terminal:

```
$ sudo rm -R /var/www/joomla/installation/
```

ili upotrebite nautilus.

Na adresi:

<http://localhost/jomla>

nalazi se vaš nov Joomla sajt spreman za rad. Kontrolni panel se nalazi na adresi:

<http://localhost/jomla/administrator>

ili jednostavno pritisnite dugme na kome piše administrator.

Uživajte.

Nadam se da sam vam bar malo olakšao.

Srđan Udovički
